

FACTORY FABRICATED INTERSECTIONS

FACTORY FABRICATED INTERSECTIONS

Fry Reglet's expertise with factory fabrication of intersections, at virtually any angle, permits the complete assembly of decorative elements ready for installation. Designers may let their imaginations soar. All that is required is a sketch with the parts to be used. Fry Reglet will design the decorative element, quote a complete price and furnish a complete assembly, ready to install. Factory fabricated intersections and corner pieces of the same or different moldings are used to connect horizontal and vertical joints, or transitioning from plane to plane. The intersections are welded and standard leg lengths are 6" from the center point of the reveal. Custom leg lengths are available. Intersections are available in the configurations shown below as well as custom configurations and may be made up of the same or different shapes.
